

It used to be so fast!

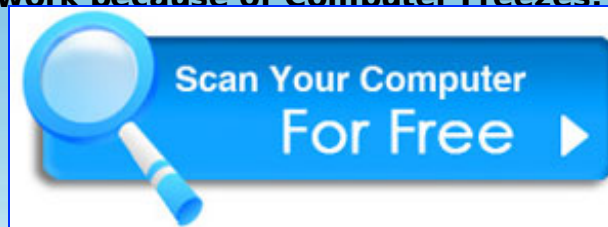

What Happened?

Slow Computer - Speed Up Your Computer Now!

Are you frustrated because your computer is getting slower and less reliable over time? You're not alone. You might ask, "Why is it now a slow computer?" it wasn't like that when it was new. Computer hardware does not slow down as it ages. The answer is, your computer hardware is probably just fine; it's the Windows registry file which is part of the operating system software that has been corrupted and is causing the trouble.

Check all that apply

- ☐ **My computer is slower than when it was new.**
- ☐ **Boot time is much slower than it used to be.**
- ☐ **I'm experiencing more frequent crashes.**
- ☐ **I'm tired of Meaningless Error Messages.**
- ☐ **I've lost work because of Computer Freezes.**

All computers that have a Windows Operating System have a pesky file called The Windows Registry, a storehouse for all of your PC's internal instructions. Changes to your computer such as software installations or removal, preference settings, hardware changes, day-to-day computing activity, and even spyware and viruses can all impact this vital file. Over time the registry becomes cluttered with broken links and junk that can dramatically impact the speed and reliability of your PC. Now you can stop asking yourself, "Why is it now a slow computer?" and fix the problem now!

Improved registry health will help with the following:

-  Restore Your PC to Optimal Performance.
-  Improve your PC's startup speed.

- ✓ Extend the usable life of you computer.
- ✓ Very Easy to install and use.
- ✓ Registry is automatically and securely backed up.
- ✓ And much More....

Put the snap back into your computer and save the expense of purchasing a new computer system. Click on the **Free Computer Scan** button above and quickly find out why my computer has become a computer slow. A quick tune-up may be all you need to put the life back into your PC.
